

Mansoor Sheik-Bahae
Distinguished Professor

Department of Physics and Astronomy
University of New Mexico, MSC07-4220
Albuquerque, NM, 87131

Tel: (505) 277-2080
e-mail: msb@unm.edu,
Web: www.optics.unm.edu/sbahae/

Educational History:

Ph.D. Electrical Engineering (Electro-Physics), 1987
State University of New York (SUNY) at Buffalo

M.S. Electrical Engineering, 1982
Catholic University of America, Washington D.C.

B.S. Electrical Engineering, 1980, *Summa Cum Laude*
Catholic University of America, Washington D.C.

Employment History:

- | | |
|-------------|---|
| 8/14- now | Distinguished Professor, Department of Physics and Astronomy,
University of New Mexico, Albuquerque, NM |
| 6/05- 8/14 | Professor, Department of Physics and Astronomy,
and Department of Electrical and Computer Engineering
University of New Mexico, Albuquerque, NM |
| 8/94- 5/05 | Assistant and Associate Professor, Department of Physics and Astronomy,
University of New Mexico, Albuquerque, NM |
| 9/90 - 8/94 | Associate Research Professor, Center for Research and Education in Optics and
Lasers (CREOL), University of Central Florida, Orlando, Florida |

Awards:

- ◆ UNM Distinguished Professor (2014)
- ◆ OSA's **R. W. Wood Prize** (shared with Eric van Stryland) – March 2012
- ◆ Recognized for "Most cited paper in the history of IEEE-JQE", LEOS 2007
- ◆ *OSA Fellow* (2000)
- ◆ 1996 *NSF-CAREER award*
- ◆ 1990 *Engineer of the Year Award*, IEEE/LEOS (Orlando, Florida)

Professional Service:

- General Chair of *Optical Science and Engineering Program (OSE)*, University of New Mexico (03-09)
- Director of Consortium for Laser Cooling in Solids (CLCS), 2004-now
- Member, Board of Directors of UNM's Science and Technology Transfer Corporation STC.UNM
- Topical Editor, Journal of Optical Society of America (B). 2010-2013
- Member of the Executive Organizing Committee (SPIE- Photonics West- LASE): 07,08,09,10
- Conference co-chair (Laser Cooling in Solids, SPIE- Photonics West) 07,08,09,10,11,12
- Chair and member of program subcommittee *Applications of Nonlinear Optics* for CLEO 99-04
- Member of the OSA's Committees: *New Focus Student Award* (1998 and 1999), Book Publishing and Web Committees (2003), Holonyak Award Committee (2004-2006).
- Member of IEEE-LEOS Program Committee on *Nonlinear Optics*, 2003

Personal: US Citizen, Married, DOB: 1956

Scientific Contribution Highlights:

- Invented the Z-scan technique (with coworkers, Eric van Stryland and Ali Said). Z-scan is a sensitive and powerful experimental method for absolute measurement of optical nonlinearities of materials. This technique and its mathematical analysis were published in a series of nine original papers by myself and co-workers. Z-scan is now being used extensively in many universities and research institutes around the world. It is also described and analyzed in most text books in nonlinear optics. According to Google Scholar, the collection of papers we authored on Z-scan has been cited more than 7600 times (Oct. 2013). One of these papers (IEEE/JQE/1990) has been named the most cited paper of JQE history (2007). It was reprinted in an SPIE's Milestone Series of Selected Reprints on *Ultrashort Laser Pulse Bioeffects*, edited by William P. Roach, Thomas E. Johnson (2003). Sheik-Bahae and Van Stryland were awarded the OSA's R. W. Wood Prize for the invention of Z-scan.
- Developed a simple, comprehensive quantum mechanical theory for predicting the ultrafast electronic optical nonlinear coefficients of semiconductors. This work required a better understanding and formulation of the Kramers-Kronig transformation as applied to nonlinear optics. The theory gives a universal and consistent relationship between absorptive and refractive components of the nonlinear coefficients in optical solids. This has proven to be of great importance in device applications such as ultrafast all-optical switching and sensor protection. There are seven papers authored by myself and co-authors on this subject, which have been cited more than 1200 times (Google Scholar, 2013).
- Performed pioneering work on the physics, measurement, and applications of the cascaded second-order nonlinearities. The definitive papers on this topic were authored by myself and co-workers and have been cited more than 920 times (Google Scholar, 2011).
- Have made key theoretical and experimental contributions to the field of solid state laser cooling. In 2009, UNM team reported the first laser cooling to cryogenic temperatures. Also (together with Richard Epstein of LANL) developed a theory (known as SB-E model) for laser-cooling in semiconductors under arbitrary external efficiency (PRL, 2004). This theory and the experimental procedure (time-gated differential luminescence thermometry) developed by MSB were recently employed by scientists in Singapore to demonstrate the first laser cooling in a semiconductors; a major scientific breakthrough reported in the Journal of Nature. Also a co-inventor of the “nano gap thermal barrier” for solving the luminescence trapping problem. (U.S. Patent # 6,378,321), and has 4 other pending patent applications in this area. Our papers in this filed have been cited more than 500 times since year 2000.
- Developed the MOSAIC algorithm together with the Kerr-Lens-Autocorrelation experimental technique for ultrashort laser pulse characterization. This resulted in the issuance of a U.S. Patent (6,108,085). Two manufacturers (Femtochrome, Berkeley, CA, and APE in Germany) have been exploring the use of MOSAIC algorithm in their commercial autocorrelators. Number of citations to pulse characterization papers: >170.

Other Research Recognitions:

- Elected Fellow of the Optical Society of America (OSA) in 2000 for “Insight into the Application of Causality in Nonlinear Optics” and “Invention of Z-Scan”. Also recognized by IEEE-LEOS for authoring the most cited paper (for Z-scan) in the history of the IEEE-JQE in 2007.
- Results of research on laser cooling of solids (*Physical Review Letters* **17**, 3600, 2000) was highlighted in the journal of *Nature* (News and Views, May 2000).
- Achievement of cryogenic laser cooling was highlighted in numerous science magazines (online and print) such as Physics Today (April 2010) and Photonics Spectra. It was also subject of press releases by AFOSR and CLEO/QELS committees.
- Our paper [Appl. Phys. Lett. **102**, 252102 \(2013\)](#) reporting an external quantum efficiency of 99.5% in GaAs -a world record in any material- was selected for the journal’s Recent Research Highlights.
- Our recent paper on terahertz nano plasmonics (published in Phys. Rev. B) became an Editor’s Selection. It was also written about in the Research Highlights section of the Nature Photonics (Dec. 2011).
- PhD Students Awards:

- Chad Hoyt: OSA *New Focus Student Award* (2000). His work on optical refrigeration earned the top prize of \$10,000. Also received NRC postdoc fellowship (2004).
- Denis Seletskiy: Mary-Curie Fellow (2013), NRC postdoc fellowship (2010). Part of US Student Delegation at Lindau meeting of Nobel Laureates (2007).
- Wendy Patterson: *Los Alamos National Lab (LANL) Student Distinguished Performance Award* (2008)
- Daniel Bender: *Best Poster Prize* for “Ultrafast lasers: identifying the *perfect* pulse”, SPIE Photonics West (2008).
- Seth Melgaard: NRC Postdoctoral Fellow (2012-2014), Best Paper Prize at UNM’s Research Exposition (2013)

Current Research Activities:

Laser Cooling in Solids: As the director of Consortium for Laser Cooling in Solids (CLCS), I lead a multidisciplinary team of world class scientists from multiple universities and national labs working toward first observation of laser cooling in semiconductors as well as achieving cryogenic temperatures in rare-earth doped solids. My group recently reported a breakthrough in achieving the first ever all-solid-state cryocooler by laser cooling a Yb:YLF crystal to about 150K starting from room temperature. Overall, together with Epstein’s group at LANL and our other collaborators, we have achieved great progress with multitude of innovations in both experimental and theoretical areas. A few sample publications are:

(1) C. W. Hoyt, M. Sheik-Bahae, R. I. Epstein, B. Edwards, J. Anderson “Observation of anti-Stokes fluorescence cooling in Tm-dopes glass”, Phys. Rev. Lett. Vol. 17, 3600 (2000) (2) M. Sheik-Bahae and R. I. Epstein, “Can Laser Light Cool Semiconductors?, Phys. Review Lett. . **92**, 247403 (2004). (3) B. Imangholi, M.P. Hasselbeck, and M. Sheik-Bahae. R. I Epstein, S. Kurtz, “Effects of epitaxial lift-off on interface recombination and laser cooling in GaInP/GaAs heterostructures,” Appl. Phys. Lett. **86**, 81104 (2005) (4) M. Sheik-Bahae and R.I. Epstein, “Optical Refrigeration”, Invited Progress Article, Nature (Photonics), Vol. 1, 693-699 (2007). (5) W. Patterson, M. Sheik-Bahae, S. Bigotta, D. Parisi, M. Tonelli, and R. I. Epstein, “Anti-Stokes luminescence cooling of Tm³⁺-doped BaY₂F₈,” Optics Express, Vol. 16, No. 3, 1704 (2008). (6) Denis V. Seletskiy, Seth D. Melgaarda, Stefano Bigottab, Alberto Di Lietob, Mauro Tonellib, and Mansoor Sheik-Bahae, “Laser Cooling of Solids to Cryogenic Temperatures”, Nature Photonics, 4, 161-164 (2010)

Ultrafast Phenomena and Nonlinear Optics: Various projects are underway in my group involving ultrashort laser pulse characterization, extreme wavelength generation and detection, and semiconductor plasmonics:

◆ **Ultrafast Diagnostics:** Group has been active in the area of ultrashort laser pulse characterization. Following are our recent publications involving our Modified Spectrum Auto Interferometric Correlation (MOSAIC) technique:

(1) T. Hirayama, and M. Sheik-Bahae, “Real-time chirp diagnostic in ultrashort laser pulses,” Opt. Lett. Vol. 27, 860-862 (2002). (2) D. Bender, M.P. Hasselbeck, and M. Sheik-Bahae, “Sensitive ultrashort pulse chirp measurement,” Opt. Lett. Vol. **31**, 122-124 (2006). (3) D. Bender and M. Sheik-Bahae, “Modified spectrum autointerferometric correlation (MOSAIC) for single-shot pulse characterization,” Opt. Lett. Vol. **32**, 2822-2824 (2007). (4) D. A. Bender, M. Sheik-Bahae, “Complementary ultrashort laser pulse characterization using MOSAIC and SHG FROG,” Opt. Lett. Volume: 35 2191 (2010)

◆ **Novel Concepts and Applications in Optically-Pumped Semiconductor Lasers (OPSL) :** Based on evanescent wave coupling and total internal reflection I have developed a novel active mirror configuration that could potentially resolve the thermal issues encountered in power scaling of such lasers. A patent application was awarded, another one pending. In collaboration with Sandia National Labs, we have developed high power narrow linewidth OPSLs at 1020 nm for intracavity laser cooling of Yb:YLF resulting in first demonstration of

compact diode-pumped cryocoolers. Most recently, we have developed model and demonstrated self-mode locking in OPSLs based on negative ultrafast Kerr effect in semiconductor gain chip.

(1) M. Sheik-Bahae, *Evanescence-Wave Subcavity Amplifiers and Lasers*, U.S. Patent # 11/845,367. (2) M. Ghasemkhani, Sheik-Bahae, et al. submitted to Optics Express 2013. (3) A. Albrecht, M. Sheik-Bahae et al Optics. Express (2013)

◆ **Coherent Control in XUV/THz Generation:** An ongoing project investigates correlations and coherent control in simultaneous generation of XUV bursts and single-cycle THz pulses by two-color laser fields. We have developed a simple hybrid-model based on classical trajectories that remarkably explains most of our observations.

(1) A. Gragossian, D. V. Seletskiy, M. Sheik-Bahae, CLEO 2013, NLO 2013, Also manuscript in preparation for submission to Phys. Rev. Lett. (Nov. 2013)

◆ **Semiconductor Plasmonics and THz Spectroscopy:** In collaboration with Sandia National Labs, we use femtosecond technology to probe coherent plasmon and phonon oscillations via THz emission in semiconductor bulk and nano structures. Our recent experiments show (a) first direct observation of Landau damping in a semiconductor plasma, and (b) first THz emission from semiconductor nanowires resulting from surface acoustic plasmons. Most recently we have observed strong linear electro-absorption in asymmetric double quantum wells for THz coherent detection and imaging. Sample publications are:

Leonard, A. A. Talin, A. and M. Sheik-Bahae, "Efficient terahertz emission from InAs nanowires," *Phys. Rev. B* 84, 115421 (2011) [PRB's Editors' Selection]

Research Funding at University of New Mexico

Total > \$ 17M (since 1995)

◆ NSF: \$4M
(CAREER, IGERT, MRI, and regular grants)
◆ AFOSR \$6.3M
(MURI, DURIP, HSI, STTR and regular grants)

◆ NASA \$ 0.9 M
◆ DTRA \$2.5 M
◆ LANL/ Univ. of California: \$ 0.3M
◆ DARPA \$1.35M
◆ NATO

Also was awarded the UNM's STC Gap Funding in 2010 for project "Intra-Cavity Enhanced Cryogenic Optical Refrigerator (ICE-CORE)".

One SBIR and two STTR grants (Phase-I) on the subject of solid-state laser cooling were awarded in 2011 (in collaboration with Thermodynamic Films LLC). One STTR was awarded a Phase-II grant.

PUBLICATIONS

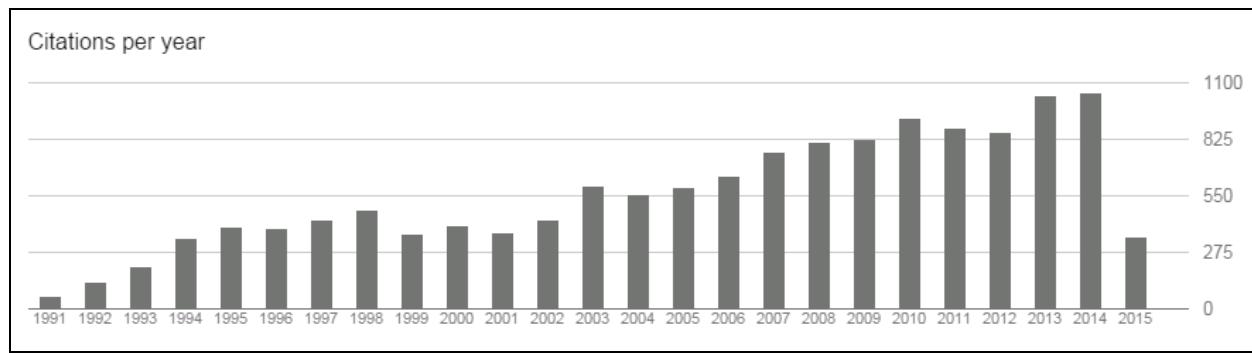

Summary:

7 edited books, 9 book chapters, >150 refereed publications (18 invited),

>200 presentations at the meetings (45 invited), 4 US patents, 4 pending

Total Citations > 13000 (>5000 since 2008)

H-index: 37, i10-index: 78, i100-index: 20

Invited Book Chapters:

1. Characterization and Modeling of Nonlinear Optical Absorption and Refraction, E.W. Van Stryland, M. Sheik-Bahae and D.J. Hagan, in *Nonlinear and Quantum Optics*, ed. N. Bloembergen, pp. 527-578, Research Trends in Physics Series, Institute for Advanced Studies Press, 1997.
2. Z-scan Technique for Materials Characterization, Eric Van Stryland and M. Sheik-Bahae, in *Materials Characterization and Optical Probe Techniques, Critical Reviews of Optical Science and Technology*, Vol. CR69, 501-524, SPIE 1997.
3. Nonlinear Optics of Bound-Electrons in Solids, M. Sheik-Bahae, in *IMA Volumes in Mathematics and Applications*, ed. J.V. Moloney, Volume 101, page 205-220, Springer-Verlag, 1998
4. Z-Scan, E. W. Van Stryland and M. Sheik-Bahae, , in *Characterization Techniques and Tabulations for Organic Nonlinear Materials*, M. G. Kuzyk and C. W. Dirk, Eds., page 655-692, Marcel Dekker, Inc., 1998
5. Optical Nonlinearities in the Transparency Region of Bulk Semiconductors, M. Sheik-Bahae and E.W. Van Stryland, in *Nonlinear Optics of Semiconductors*, E. Garmire and A. Kost, Eds., Volume 58 of Semiconductor and Semimetals, pp. 257-318, Academic Press (1998)
6. Third Order Optical Nonlinearities, M. Sheik-Bahae and M. P. Hasselbeck, in *OSA Handbook of Optics*, Vol. IV, pp 17.3-17.38, McGraw-Hill, 2001
7. Nonlinear Refraction, M. Sheik-Bahae, in *Encyclopedia of Optical Engineering*, Dekker, (2003) ISBN: 0-8247-4258-3
8. Nonlinear Optics Basics: Kramers-Krönig Relations in Nonlinear Optics, M. Sheik-Bahae, in *Encyclopedia of Modern Optics*, edited by Robert D. Guenther, Duncan G. Steel and Leopold Bayvel, Elsevier, Oxford, 2004, ISBN 0-12-227600-0.
9. Laser Cooling of Solids, R. I. Epstein & M. Sheik-Bahae, in McGraw-Hill Yearbook of Science and Technology 2011, pp. 174-177, ISBN: 978-0071763714 (December , 2010)

Patents:

1. *Interferometric Auto-Correlator Using Third-Order Nonlinearity*

U.S. Patent #6,108,085; 2000; M. Sheik-Bahae

2. *Semiconductor-Based Optical Refrigerator*

U.S. Patent #6,378,321; 2002; R. I. Epstein, B. C. Edwards, and M. Sheik-Bahae

3. *Evanescence-Wave Subcavity Amplifiers and Lasers*

U.S. Patent # 11,845,367, M. Sheik-Bahae

4. *High Frequency Thin Film Liquid Crystal Thermal Switches* (pending)

U.S. Patent Application, Richard Epstein, Kevin Malloy and M. Sheik-Bahae

5. *Optical Coupled-Cavity Photo-Acoustic Spectroscopy* (awarded)

Provisional Application, Denis Seletskiy, M. P. Hasselbeck, M. Sheik-Bahae

6. *A Novel Method for Solid State Optical Refrigeration* (pending, STC-PS-1002)

Provisional Application, R. Epstein; M. Hehlen, D. Seletskiy, M. Sheik-Bahae

7. *All-Solid-State Optical Cryocooler Using Intracavity Optically Pumped Semiconductor Lasers*,
US Patent 8,720,219 (M. Sheik-Bahae)
